

Get Started: a Quick Walk-through to Apstrata

If you are new to Apstrata and you need a way to ramp up fast, this is the place to start with!

 However, before you start make sure you went through the [Basic Concepts](#) section.

With this walk-through, you will build a simple HTML/JavaScript application that will allow you to rapidly get familiar with Apstrata's core concepts so you can start coding your own applications.

Once you are done with the walk-through, we recommend you dive deeper in each of the different topics by reading the dedicated [Tutorials](#) and the [Reference Guides](#) sections.

 The code of the application built in the below steps is solely intended for Apstrata demonstration purposes, therefore, effort will not be spent on styling or coding best practices.
